

## **Embedding documents into Microsoft Word documents**

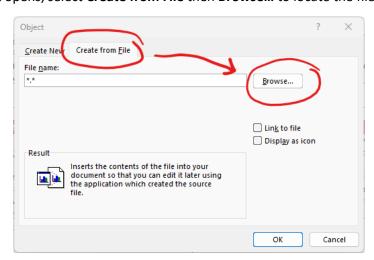

In the 2023/24 RIF reporting templates, you will see instructions to embed supporting documents e.g.

To do this, place the cursor in the required position within the form, then select Insert -> Object

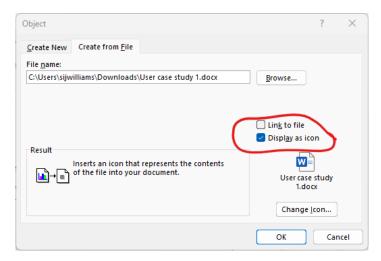

In the window that opens, select Create from File then Browse... to locate the file on your PC.

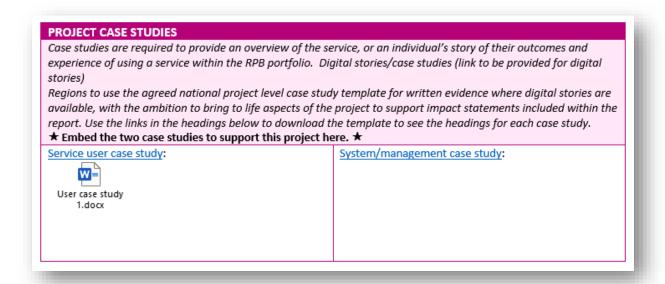

## Finally tick Display as icon then OK

The attachment will now be embedded within the form. Repeat for any additional documents to be added.

Note: Do not submit the report converted to a PDF document, the embedded attachments will not be supported in PDF format and will appear as an image only.
